                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CC is a 4 transmembrane domain, 2 pore domain potassium channel. The gene CC is located on chromosome 19, determined via PCR chromosomal CC localisation using primers AAZ11939 and AAZ11940. K+Hnov CDNAs CC were isolated by extension of expressed sequence tags (ESTs) which were CC related but not identical to known human potassium channels. Potential CC polymorphisms detected as sequence variants between multiple CC independent clones. Potassium channels have critical roles in various CC cell types and biochemical pathways. Defective potassium channels are CC known to cause four human diseases: episodic ataxia with myokymia; CC cardiac arrhythmia (long QT syndrome); epilepsy; and Bartter's syndrome. CC is potassium channels are critical components of virtually all cells, CC it is likely that abnormal potassium channels are also implicated in CC certain renal, cardiovascular and central nervous system (CNS) CC identifying homologous or related proteins may be used for CC identifying homologous or related proteins and the DNA sequences encoding them. They may be used to produce compositions that modulate the CC biochemical pathways associated with it. They may also be used for the CC biochemical pathways associated with it. They may also be used for the treatment of diseases associated with abnormal potassium channels. CC Additionally, such nucleotides may be used in gene therapy protocols for the treatment of diseases associated with abnormal potassium channels.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence represents the human K+Hnov59 potassium channel. K+Hnov proteins have a high degree of homology to known potassium channels and may be alpha subunits, which form the functional channel, or accessory subunits that act to modulate the channel activity. K+Hnov59

The polyncelectide sequence of h-TREK1 can be used to diagnose a disease or susceptibility to a disease related to expression or activity of h-TREK-1 polypeptides. The methods of diamnosis may be used in the treatment of diseases including cancer, pulm.nary, cardiovascular, and inflammatory diseases, pain, psychiatric disorders including depression and schizophrenia, neurodegenerative diseases including Alzheimer's,

                                                                                                                                                                                                                                                                                                  2P domain potassium channel family of protests which play a part in the control of resting membrane potential. Modulation of these channels will therefore affect neuronal excitability, thereby leading to a modulation of neurotransmitter release and activity of neuronal networks. Such modulation therefore may be useful for the treatment of certain neurological conditions such as anilarcom.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; TREK; 2P domain potassium channel; resting membrane potential; neuronal excitability; neurotransmitter release modulation; epilepsy; neurological disorder; sleep-related disorder; cognitive dysfunction; attention deficit disorder; addiction; anxiety; phobia; parkinson's chorea; Huntington's chorea; cerebral palsy; incontinence;

             This sequence is the mouse h-TREK1 polypept! . encoded by the h-TREK1 polypucleotide AAZ00040. h-TREK1 is a two per potrassium channel. The polynucleotide sequence of h-TREK1 can be used to diagnose a disease or susceptibility to a disease related to expression or activity of h-TREK-1 polypeptides. The methods of diaments may be used in the treatment of diseases including cancer, puln cary, cardiovascular, and inflammatory diseases including cancer, polin cary, cardiovascular, and schizophrenia, neurodegenerative diseases including Alzheimer's, stroke, and head trauma and neurological dispreces including migraine.
                                                                                                                                                                                                                                                                                                                                                         h-TREK1; two pore potassium channel; inflamma .ry disease; chromosome 1q32.

                            The present sequence represents a mechanically sensitive potassium channel protein designated TREK-1. The protein is activated by polyunsaturated fatty acids, particularly arachidonic acid, and by riluzole. The protein is used to screen for specific modulators which are useful for treating or preventing diseases of the heart and nerve systems in humans and animals, e.g. epilepsy, cardiovascular disease (arrhythmia), neurodegeneration (particularly where associated with

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAY94426 standard; Protein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    schizophrenia, neurodegenerative disease including Alzheimer's, s
and head trauma and neurological disorders including migraine and
epilepsy. The present sequence is human h-TRAAK protein #1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   imbalance and for identifying agonists and antagonists of h-TRAAK polypeptides and polynucleotides may also polypeptides. The h-TRAAK polypeptides and polynucleotides may also be useful for treatment and prevention (e.g. as veccines) of certain diseases, such as pain, psychiatric disorders including depression of the diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Functional genomics was used to identify h-TRAAK polypeptides and h-TRAAK polynucleotides from human tissue samples. h-TRAAK polypeptides have homology to the 2P domain potassium channel fam polypeptides. The h-TRAAK polypeptides and polynucleotides may be used in diagnostic assays for conditions related to h-TRAAK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel isolated h-TRAAK polypeptides belonging to the potassium family of polypeptides, useful for the diagnosis and treatment h-TRAAK related disorders, e.g. depression and schizophrenia -
                                                                                                                                                                                                                                                                            WO200026253-A1
                                                                                                                                                                                                                                                                                                                                  Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human h-TRAAK polypeptide #2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence

K polypeptides and h-TRAAK polynucleotides from human tissue same us. h-TRAAK polynucleotides from human tissue same us. h-TRAAK polypeptides have homology to the 2P domain £0. Sisium channel family of polypeptides. The h-TRAAK polypeptides and polynucleotides may be used in diagnostic assays for conditions related to h-TRAAK polypeptides and ant. qonists of h-TRAAK polypeptides. The h-TRAAK polypeptides and polynucleotides may also be useful for treatment and prevention (e.g. as vaccines) of certain diseases, such as pain, psychiatric disorder: including depression and schizophrenia, neurodegenerative disease in adding Alzheimer's, stroke and head trauma and neurological disorders including migraine and

The protein is activated by polyunsaturated fatty acids, particularly arachidonic acid, and by riluzole. The protein is used to screen for specific modulators which are useful for treating or preventing diseases of the heart and nervous systems in humans and animals, e.g. epilepsy, cardiovascular disease (arrhythmia), neurodegeneration (particularly where associated with ischemia or anoxia), abnormalities of hormone secretion and muscular disease. The protein itself may be used to treat these diseases. Antibodies specific for the protein are used to detect it in tissues, also as therapeutic inhibitors or activators.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents a mechanically sensitive potassium channel protein designated TRAAK. The protein is activated by

AAZ00039 and AAY284. The complete h-TREK1 polynucleotide and polypeptide sequences. h-7-3-31 is a two pore potassium channel, and the gene maps to humar promosome 1932, between the markers D1S237 and W15105. The polynuclei de sequence of h-TREK1 can be used to diagnose a disease or susceptibility to a disease related to expression or activity of h-TREK1 polypeptides. The methods of diagnosis may be used in the treatment of diseases including cancer, pulmonary, cardiovascular, and inflammatory diseases, palso, psychiatric disorders including Alzheimer's, stroke, and head trauma and neurological

The nucleic acids, proteins, protein homologues and antibodies against them may be further used in screening assays, predictive medicine. The nucleic acids can be inserted into vectors and predictive medicine. The nucleic acids can be inserted into vectors and used as gene therapy vectors, to express TWIK protein, to detect TWIK mRNA, modulate TWIK activity, and screen for drugs or compounds that modulate TWIK activity. Host cells may be used to produce non-human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       disease), psychiatric disorders (e.g. depression, schizophrenic disorders, Korsakoff's psychosis, mania, anxiety disorders or phobic disorders), learning or memory disorders (e.g. amnesia or age-related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           and therapeutic agents for potassium channel associated disorders, e.g. central nervous system disorders (e.g. Alzheimer's disease, dementia, Parkinson's disease, multiple sclerosis, amyotrophic lat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 TWIK-2 (Tandem of P domains in a Weak Inward rectifying potassium (K+) channel-2), TWIK-3 and TWIK-4 nucleic acids and proteins are useful as targets for developing modulating agents to regulate a variety of cellular processes. They may be useful for developing novel diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           dementia, Parkinson's uisease, muiting, epilepsy, Creutzfeidisclerosis, progressive supranuclear palsy, epilepsy, Creutzfeidisclerosis, schizophrenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Disclosure; Fig 1; 148pp; English
